

# DOMINATOR F58AIO SERIES

## AIR INJECTION OXIDIZING SYSTEM

Enjoy the benefits of Iron and Sulfur filtration in your home!

- Prevent yellow staining due to iron
- No more iron metallic taste and odor
- No more sulfur/rotten egg odor
- Prevent black particles
- Protects plumbing and fixtures from build-up and clogging
- Water using appliances stay cleaner and last longer
- Helps maintain hair color and prevents discoloration
- Water softeners and drinking systems operate more effectively

### Dominator F58AIO- Unsurpassed quality & engineering

- Uses air and water- no chemicals!
- Multiple media options for a range of water issues
- No separate and restrictive micronizers or venturis are required
- Saves space - no bulky contact tanks required
- Customizable electronic control head
- Back-up keeps time during power outage
- Time tested system with few moving parts
- Designed for years of trouble-free service

## STANDARD FEATURES

- Fully Automatic Control Valve
- Electronic Programmable Control
- Reinforced Polyglass Mineral Tank
- High-Capacity Media
- Backwash Drain Fitting and Clamp

## MEDIA OPTIONS

- Media for problem Iron
- Media for Sulfur
- Combination of media for custom applications

## HOW IT works

The air intake assembly draws in ambient air that is compressed in the mineral tank. As you use water, the air slowly depletes while the dissolved Iron and/or Hydrogen Sulfide is oxidized and transformed to particulate.

Periodic regeneration is required to backwash the collected oxidized particulate to drain. This process also replenishes the air supply and recharges the filter media.

The procedure may be customized to the needs of each application with the easy to program electronic control.
